

Exercises 7 Quadratic function and equations Quadratic function

Objectives

- be able to graph a quadratic function out of the vertex form of its equation.
- be able to determine the position of the vertex of a parabola out of the vertex form of the equation of the corresponding quadratic function.
- be able to convert the vertex form of the equation of a quadratic function into the general form.
- know, understand, and be able to apply the method of completing the square.
- be able to convert the general form of the equation of a quadratic function into the vertex form.

Problems

7.1 Look at the easiest possible quadratic function:

$$\begin{aligned} f: \mathbb{R} &\rightarrow \mathbb{R} \\ x &\mapsto y = f(x) = x^2 \end{aligned}$$

- a) Establish a table of values of f for the interval $-4 \leq x \leq 4$.
- b) Draw the graph of f in the interval $-4 \leq x \leq 4$ into a Cartesian coordinate system.

7.2 The equation of a general quadratic function can be written in the so-called vertex form below:

$$\begin{aligned} f: D &\rightarrow \mathbb{R} && (D \subseteq \mathbb{R}) \\ x &\mapsto y = f(x) = a(x - u)^2 + v && (a \in \mathbb{R} \setminus \{0\}, u \in \mathbb{R}, v \in \mathbb{R}) \end{aligned}$$

Investigate the influence of the three parameters \mathbf{a} , \mathbf{u} , and \mathbf{v} on the graph of the quadratic function by always varying only one parameter and keeping the other two parameters constant:

- a) Parameter \mathbf{u} (**varying u**, keeping a and v constant)

$y = f_0(x) = x^2$	$(a = 1, u = \mathbf{0}, v = 0)$
$y = f_1(x) = (x - 2)^2$	$(a = 1, u = \mathbf{2}, v = 0)$
$y = f_2(x) = (x + 1)^2$	$(a = 1, u = \mathbf{-1}, v = 0)$

 - i) Sketch the graphs of the functions f_0 , f_1 , and f_2 into one coordinate system.
 - ii) Describe the influence of the parameter \mathbf{u} on the graph of the quadratic function.

- b) Parameter \mathbf{v} (**varying v**, keeping a and u constant)

$y = f_0(x) = x^2$	$(a = 1, u = 0, v = \mathbf{0})$
$y = f_1(x) = x^2 + 3$	$(a = 1, u = 0, v = \mathbf{3})$
$y = f_2(x) = x^2 - 2$	$(a = 1, u = 0, v = \mathbf{-2})$

 - i) Sketch the graphs of the functions f_0 , f_1 , and f_2 into one coordinate system.
 - ii) Describe the influence of the parameter \mathbf{v} on the graph of the quadratic function.

- c) Parameter \mathbf{a} (**varying a**, keeping u and v constant)

$y = f_0(x) = x^2$	$(a = \mathbf{1}, u = 0, v = 0)$
$y = f_1(x) = 2x^2$	$(a = \mathbf{2}, u = 0, v = 0)$
$y = f_2(x) = -2x^2$	$(a = \mathbf{-2}, u = 0, v = 0)$

 - i) Sketch the graphs of the functions f_0 , f_1 , and f_2 into one coordinate system.
 - ii) Describe the influence of the parameter \mathbf{a} on the graph of the quadratic function.

d) Parameter **a** (varying **a**, keeping **u** and **v** constant)

$$y = f_0(x) = x^2 \quad (\mathbf{a} = 1, u = 0, v = 0)$$

$$y = f_1(x) = \frac{1}{2}x^2 \quad (\mathbf{a} = \frac{1}{2}, u = 0, v = 0)$$

$$y = f_2(x) = -\frac{1}{2}x^2 \quad (\mathbf{a} = -\frac{1}{2}, u = 0, v = 0)$$

- i) Sketch the graphs of the functions f_0 , f_1 , and f_2 into one coordinate system.
- ii) Describe the influence of the parameter **a** on the graph of the quadratic function.

7.3 For each quadratic function $f: \mathbb{R} \rightarrow \mathbb{R}, x \mapsto y = f(x)$ in a) to h) ...

- i) ... state the parameters **a**, **u**, and **v**.
- ii) ... state the coordinates of the vertex of the graph.
- iii) ... state whether the parabola, i.e. the graph of the function, opens upwards or downwards.
- iv) ... graph the function.

a) $y = f(x) = (x + 2)^2$

b) $y = f(x) = -3x^2$

c) $y = f(x) = 2x^2 - 1$

d) $y = f(x) = -(x - 3)^2 + 4$

e) $y = f(x) = \frac{1}{2}(x + 3)^2 + 2$

f) $y = f(x) = -2(x - 1)^2 + 5$

g) $y = f(x) = \frac{5}{2} - \left(x - \frac{1}{2}\right)^2$

h) $y = f(x) = -\frac{1}{2} - 3(2 - x)^2$

7.4 Look at the graphs of the quadratic functions f_0 , f_1 , and f_2 :

Determine the equations of the three functions, i.e. $y = f(x) = \dots$

7.5 The equation of a quadratic function f is written in the vertex form. Determine the general form of the equation:

a) $y = f(x) = 2(x - 3)^2 + 4$

b) $y = f(x) = -(x + 2)^2 - 3$

c) $y = f(x) = x^2 + 5$

d) $y = f(x) = -3(x - 4)^2$

7.6 Convert the given equation of a quadratic function into the vertex form by completing the square:

- | | | | |
|----|---------------------------------------|----|--|
| a) | $y = f(x) = 3x^2 - 12x + 8$ | b) | $y = f(x) = x^2 + 6x$ |
| c) | $y = f(x) = x^2 - 2x + 1$ | d) | $y = f(x) = 2x^2 + 12x + 18$ |
| e) | $y = f(x) = -2x^2 - 6x - 2$ | f) | $y = f(x) = x^2 + 1$ |
| g) | $y = f(x) = -\frac{1}{2}x^2 + 2x - 2$ | h) | $y = f(x) = -4x^2 + 24x - 43$ |
| i) | $y = f(x) = 2(x - 3)(x + 4)$ | j) | $y = f(x) = x + 3 - \left(x + \frac{1}{2}\right)x$ |

7.7 For the graphs of the quadratic functions f in exercises 7.6 a) to j) ...

- i) ... determine the coordinates of the vertex.
- ii) ... state whether the parabola opens upwards or downwards.

7.8 Decide which statements are true or false. Put a mark into the corresponding box.
In each problem a) to c), exactly one statement is true.

a) The graph of a quadratic function ...

- ... always intersects the x-axis in two points.
- ... opens downwards if it has no point in common with the x-axis.
- ... touches the x-axis if there is only one vertex.
- ... is always a parabola.

b) f is a linear function, and g is a quadratic function. It can be concluded that the graphs of f and g ...

- ... have no points in common.
- ... intersect only if the slope of f is not equal to zero.
- ... cannot have more than two points in common.
- ... have at least one point in common.

c) The vertex form of the equation of a quadratic function ...

- ... is identical with the general form if the vertex of the graph is on the y-axis.
- ... can be obtained from the general form by multiplying out all the terms.
- ... does not exist if the graph opens downwards.
- ... only depends on the position of the vertex.
