

## Exercises 17      **Definite integral** **Definite integral, area under a curve, consumer's/producer's surplus**

### Objectives

- be able to apply the fundamental theorem of calculus.
- be able to determine a definite integral of a constant, basic power, and basic exponential function.
- be able to determine the area between the graph of a basic power function and the abscissa.
- be able to determine a consumer's and a producer's surplus if the demand and supply functions are basic power functions.

### Problems

17.1 Calculate the definite integrals below:

a) $\int_3^4 (2x - 5) dx$	b) $\int_0^1 (x^3 + 2x) dx$	c) $\int_{-5}^{-3} \left(\frac{1}{2}x^2 - 4\right) dx$
d) $\int_2^4 \left(x^3 - \frac{1}{2}x^2 + 3x - 4\right) dx$	e) $\int_{-2}^2 \left(-\frac{1}{8}x^4 + 2x^2\right) dx$	f) $\int_{-1}^1 e^x dx$
g) $\int_0^1 e^{2x} dx$	h) $\int_{-1}^1 e^{-3x} dx$	

17.2 Determine the area between the graph of the function  $f$  and the  $x$ -axis on the interval where the graph of  $f$  is above the  $x$ -axis, i.e. where  $f(x) \geq 0$ .

a) $f(x) = -x^2 + 1$	b) $f(x) = x^3 - x^2 - 2x$
----------------------	----------------------------

Hints:

- First, determine the positions  $x$  where the graph of  $f$  touches or intersects the  $x$ -axis, i.e. where  $f(x) = 0$
- Then, determine the interval on which the graph of  $f$  is above the  $x$ -axis, i.e. where  $f(x) \geq 0$

17.3 The demand function for a product is  $p = f_d(x) = (100 - 4x^2)$  CHF.  
If the equilibrium quantity is 4 units, what is the consumer's surplus?

17.4 The demand function for a product is  $p = f_d(x) = (34 - x^2)$  CHF.  
If the equilibrium price is 9 CHF, what is the consumer's surplus?

17.5 Suppose that the supply function for a good is  $p = f_s(x) = (4x^2 + 2x + 2)$  CHF.  
If the equilibrium price is 422 CHF, what is the producer's surplus?

17.6 The supply function  $f_s$  and the demand function  $f_d$  for a certain product are given as follows:

$$p = f_s(x) = (x^2 + 4x + 11) \text{ CHF}$$

$$p = f_d(x) = (81 - x^2) \text{ CHF}$$

Determine ...

- ... the equilibrium point, i.e. the equilibrium quantity and the equilibrium price.
- ... the consumer's surplus at market equilibrium.
- ... the producer's surplus at market equilibrium.

17.7 (see next page)

17.7 Decide which statements are true or false. Put a mark into the corresponding box.  
In each problem a) to c), exactly one statement is true.

a) The definite integral of a function is a ...

- ... real number.
- ... function.
- ... set of functions.
- ... graph.

b)  $\int_a^b f(x) dx$  ...

- ... =  $f(b) - f(a)$
- ... =  $F(a) - F(b)$  where  $F$  is an antiderivative of  $f$ .
- ... is equal to the area between the graph of  $f$  and the  $x$ -axis in the interval  $[a,b]$  if  $f(x) \geq 0$  for all  $x \in [a,b]$
- ... cannot be calculated unless all antiderivatives of  $f$  are known.

c) The consumer's surplus is an area between ...

- ... the graphs of the demand and the supply functions.
- ... the  $x$  axis and the graph of the demand function.
- ... the graph of the demand function and the horizontal line "price = equilibrium price".
- ... the horizontal line "price = equilibrium price" and the graph of the supply function.
